Quick Reference

Filtered view for the author audience — generated from the same source chapters as the manual.

About this page

The essentials of the DocWiz editor on one page. Every section links to the full chapter in the manual.

The editor window

	PART	WHAT IT IS FOR
1	Title bar	The project menu (click the project's name), **Preview as**, **Check**, **Build handover**, and the power button that stops the editor
2	Sidebar	Three tabs — **Manual** (sections and chapters), **Outputs** (slide decks and documents) and **Files** (pictures and attachments) — with **Project settings** at the bottom
3	Document bar	Where you are (*Section / Title*), who reads this chapter, the save state, and **Edit · Source**, **Read**, **History**, **Properties** and ⋯
4	Toolbar	Text formatting, lists, alignment, links, pictures, tables, building blocks and **Readers**
5	The page	The chapter itself — click anywhere and type
6	Context bar	Appears when you click a picture, a table or a building block, with the tools for just that thing

Table 1 — The parts of the editor window

Building blocks

BLOCK	USE IT FOR
Note	Something worth knowing
Tip	A faster or safer way to do something
Warning	A risk the reader can avoid — the label can be changed
Danger	Serious hazards: injury, damage, data loss
Procedure steps	Step-by-step instructions with big numbers
Navigation cards	A grid of links to chapters, for overview pages
Button row	Links shown as buttons, for the next step
Collapsible section	Details the reader opens only when needed
Centered text, Right-aligned text	Aligning text, tables or pictures
Group	Keeping blocks together so a slide can show them

Table 1 — The building blocks

Links

Select the words that should become the link — or just click where it should go — and open **Link** in the toolbar:

CHOICE	LINKS TO
Web address…	A page on the internet or your intranet
Chapter or section…	Another chapter of this manual, a section of it, or a group
Attachment…	A PDF or other document that ships with the handover
Copy link to this section	Copies the link to the heading you are in, to paste somewhere else

Table 1 — The Link menu

For a chapter link, pick the **Chapter** (listed by section), then optionally a **Section** of it, and check the **Link text** — it is filled in for you. For example: the section about captions in tables, the Text, headings and lists chapter, or the group of steps and checks.

A web link works the same, with the address instead — for example the CommonMark specification (https://commonmark.org), the text format behind every DocWiz chapter.

One procedure, several readers

Inside a procedure, click into one step and use **Readers** in the toolbar — the menu then asks *Who reads this step?*. Outputs for other audiences leave the step out and number the remaining steps without a gap:

1. Open the project in the editor.
2. Build the handover and open it.
3. Send the handover to the customer.

An author's output shows three steps, numbered 1 to 3; an administrator's shows all four.

Keys for writing

KEYS	WHAT THEY DO
Ctrl+Z	Undo — page and sidebar changes, newest first
Ctrl+Y or Ctrl+Shift+Z	Redo
Ctrl+S	Save now (DocWiz also saves by itself)
Ctrl+B / Ctrl+I	Bold / italic
Ctrl+V	Paste — a picture is stored in the project for you
Tab / Shift+Tab	In a list: move the item in / out a level
Enter on an empty last line of a block	Leave the block
Delete	Delete the selected picture, table or block
Esc	Leave the selected picture, table or block; close a menu
/ at the start of a line (on slides and in documents)	Quick insert menu

Table 1

KEYS	WHAT THEY DO
Tab / Shift+Tab	Next / previous cell
Enter	Finish the cell
Shift+Enter	New line inside the cell
Esc	Leave the cell without keeping what you typed

Table 1

Typing shortcuts

If you know a little Markdown, type it at the start of a line and the editor turns it into the right block as you go:

TYPE AT THE START OF A LINE	YOU GET
`#` to `####`	A heading of that level
`-` or `*`	A bulleted list
`1.`	A numbered list
`>`	A quote

Table 1 — Typing shortcuts

Inside a line, `**bold**`, `*italic*`, `~~strikethrough~~` and `` `code` `` turn into formatted text once you type the closing marks.

Before you send a handover

Click **Check** in the title bar. DocWiz goes through the whole project and lists what it finds:

- **Errors** stop the build: a link to a chapter or section that doesn't exist, an output that shows a missing section, an audience that isn't defined.
- **Warnings** don't: a picture that isn't there yet (the handover shows a placeholder box instead), a heading with a typed number, an output that shows a chapter not meant for its audience.

No issues ✓ means everything is in order. Check messages explains the common messages and what to do about them.
